

Lesion Nodes

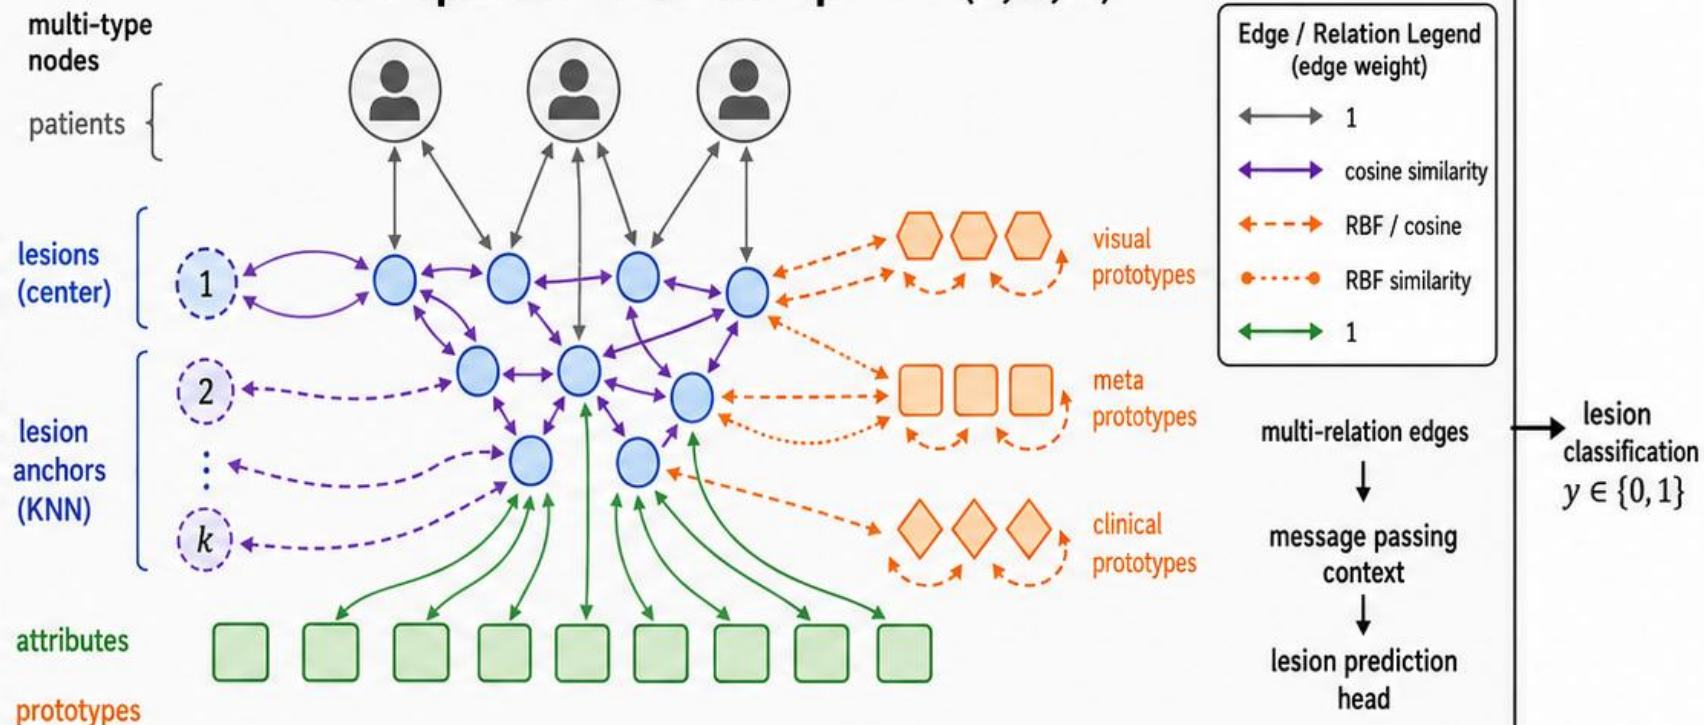

- one sample = one lesion node
- classification target only on lesion nodes
- $y \in \{0, 1\}$: classification label

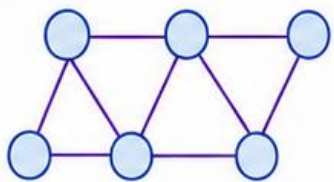

create lesion nodes

Fold-specific HeteroGraph $G = (V, E, R)$

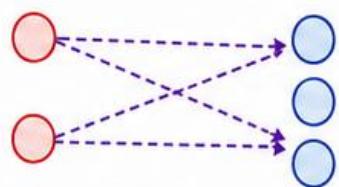

fold-specific split-safe construction

Train Graph

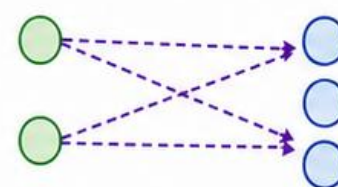

- train lesions + train patients
- train attributes & prototypes

Validation Query Graph

- query lesions
- train context (anchors)

Test Query Graph

- query lesions
- train context (anchors)

forbidden transductive leakage
